U.S. Patent and Trademark Office

Continuation of 11. does NOT place the application in condition for allowance because: Regarding Applicant's allegation that the rejection of claims 1-32 under 3 st U.S.C. 112 is improper (Remarks p. 26). Examiner maintains that Applicant has not scliently shown that "motion compensation factor" is well known in the art to the extent that a skilled artisan would be able to reasonably determine, without undue experimentation, how to derive such a factor, much less use it with the claimed invention. The mere statement that the motion compensation factor "may be based on a priori data in the form of an organ motion model" is vague and non-specific and does not enable a skilled artisan to derive the factor from such a noirior data without undue excertimentation

Regarding Applicant's allegations that the Examiner has not shown sufficient motivation to combine the teachings of Bohning and Keegan (Remarks p. 33). Examiner maintains that Keegan teaches that use of a motion correction factor is more accurate for correcting motion artifact in image data, wherein such teaching itself would sufficiently motivate a skilled artisan to use the motion compensation of Keegan instead of that of Bohning in the method and system of Bohning. Furthermore, even if Keegan did not provide uch motivation, it would have been obvious to a skilled artisan to try the correction means and steps of Keegan in place of those of Bohning in order to try to improve the accuracy of motion correction (KSR v. Teleflex O.).

Regarding Applicant's allegations that the combination of Bohning, Keegan and Roberts does not result in a method or system incorporating both electrical and non-electrical sensors, the Office Action plainly states that it would be bovious to a skilled artisan to use both types of sensors concurrently to use the non-electrical data to confirm the accuracy of the electrical data.
